# ADVANCED EXCEL

## Practice Set: First Part Practice set

### 📌 Freeze Panes

1. Freeze the first row so headers are always visible while scrolling.
2. Freeze the first column so Emp_ID is always visible.

---

### 📌 Flash Fill

3. Use Flash Fill to create full names in a new column using First and Last names.
4. Extract domain name from email IDs using Flash Fill after entering one example (e.g., @gmail.com, @company.com).

---

### 📌 Prefix/Suffix Handling

5. Add prefix “EMP-” to all Emp_IDs using a formula.
6. Add suffix “@company.com” to FirstName to generate an email ID.

---

### 📌 Cell References (Relative, Absolute, Mixed)

7. Multiply all salaries with 12 to calculate annual salary using relative reference.
8. Apply a bonus of 10% from a fixed cell and calculate net salary using absolute reference.
9. Create a formula where column is fixed (e.g., $C3) and row is relative.

---

## 📌 Data Validation

10. Apply whole number validation in Rating column (only 1 to 5 allowed).
11. Apply text-only restriction in First Name.
12. Allow only numeric values in the Salary column.
13. Create a drop-down list for Dept column: Sales, IT, Finance, HR.
14. Create a dependent dropdown in State column based on selected Country.

---

## 📌 Conditional Formatting

15. Highlight employees with rating less than 3 in red.
16. Highlight second highest salary using formula and manage rules.
17. Use 3-color scale to show performance in Projects column.
18. Use conditional formatting to highlight salaries above 50,000 with green fill and bold font.

---

## 📌 Sorting

19. Sort employees by Join Date from oldest to newest.
20. Sort records by Dept (A to Z) and within dept by Salary (high to low).

---

## 📌 Filter & Advanced Filter

21. Apply a basic filter to show only “Sales” department employees.

22. Use Advanced Filter to extract employees from “IT” with salary above 40,000 to a new location.

---

📌 **UNIQUE Function**

23. Use =UNIQUE() to list all unique departments from the Dept column.
