Practice Set 1 ADVANCED EXCEL

Task: Perform the following formatting and data validation tasks in an Excel worksheet:

1. **Table Formatting:**
    - Arrange the database in a table with thick outside borders.
    - Rename the sheet as **"HR Database"** and assign a tab color.
    - Set the row height to **20** for the entire sheet.
2. **Header Formatting:**
    - Apply **bold formatting** to the headings.
    - Set the font size to **14** and font color to **red**.
    - Apply a **light fill color** to the heading cells.
3. **Font & Alignment:**
    - Use **"Times New Roman"** as the font for the entire database.
    - Align the text in the **Salary** and **Employee ID** columns to **Center**.
    - Merge the top row of the database and insert a **suitable heading**.
4. **Data Formatting & Validation:**
    - Apply the **INR currency symbol** to the **Salary** column.
    - Use a **single formula in cell L5** to calculate the **Bonus** for the entire table.
    - Set a **data validation rule** in the **Basic Salary** column to accept values **between 1,000 and 100,000**, with an **input message** explaining the restriction.
    - Create a **drop-down list** for selecting **Department Names** and **Gender**.
    - Restrict the **Employee Name** column to **accept only text values**.
5. **Conditional Formatting:**
    - Highlight the **top 3 employees** based on salary with a **color fill**.
    - Apply a **Data Bar** to the Salary column and then **clear it**.

- Apply an **icon set** only for employees earning **more than ₹6,500 per month**, then **clear it**.
- Highlight the **names** of employees earning **more than ₹6,000 per month**, then **clear it**.

6. **Dependent Dropdown & Conditional Formatting:**
   - Set up a **dependent drop-down list** in cell **W12**.
   - Create a **drop-down list of departments** in **L13**. When a department is selected, highlight the **rows** containing employees from that department in **yellow**.
7. In **cell N19**, calculate **HRA** using the formula:
   - **HRA = 20% of Total Salary**
   - Also, compute **Total Salary** using the formula:
     Total Salary = Basic + DA + HRA
8. Save the file in a **folder named after you** on the **desktop**.
